

# HULL POLISHING

BY SPIKE ON THE WATER

## ABOUT HULL POLISHING

The topsides surfaces require corrections. The elements are constantly attacking your gel coat producing oxidation every day without protection. The theory is your gel coat is like your skin, its porous. When it dries out it must be ex-foliated (compound) and toned (polish) to bring back the health before moisturizing (coating) can be applied.

\* Hull polishing services include waterline to deck-line/rub-rail and include the transom.

### WHAT'S INCLUDED ?

Hull polish services are selected for the premium health of boat exteriors. We have many solutions and maintenance options to restore, revitalize and reconstitute the health of your gel coat surfaces. Wet sanding, Compounding and/or polishing services for surfaces below the deck line including the transom.
